EDUCATION

University Of Waterloo

Bachelors of Computer Science
(Software Engineering Option)

- Expected Graduation: Fall 2020
- Current Term: 3B
- Academic Standing: **Excellent**
- **"Outstanding"** evaluations in all previous work terms
- Recipient of Term Dean's Honours List (Spring 2017)
- Recipient of President's Scholarship of Distinction (2014)

SKILL HIGHLIGHTS

LANGUAGES

- C++
- JavaScript
- C#
- HTML
- Java
- CSS
- Visual Basic

FRAMEWORKS / TECHNOLOGIES

- Asp.NET
- Node.JS
- Git
- SQL Server
- TFS
- MongoDB
- PostMan
- XLib
- BASH
- Android Studio
- Selenium

EXPERIENCE

Software Developer | Oracle

Jan, 2019 - Apr, 2019

- Implemented and demoed stories that directly resulted in new client subscriptions, worth multiple-millions of dollars
- Fixed multiple bugs in the core application to remedy release block
- Teamed up with Automations to tackle testing debt by automating over 50 test cases

Software Developer | Dye & Durham

May, 2018 - Aug, 2018

- Implemented back-end REST-ful APIs for new Web Services using C#
- Utilized the ASP.NET framework to write screen scrapers to interact with existing Government websites and databases

Quality Assurance Analyst | pVelocity

Sept, 2017 - Dec, 2017

- Conceptualized testing scheme for a new product features
- Developed JavaScript functions to act as a test client to product API
- Designed and documented automated integration test cases

Backend Developer | SecureITLab

Apr, 2017 - May, 2017

- Implemented product APIs using PHP and MongoDB stack
- Upgraded the front-end using the Twig template engine and integrated backend APIS

PROJECTS

Tour Plus

- Formulated idea to connect tourists with local guides for personalized tours
- Engineered backend implementation by designing and writing RESTful APIs using Node.JS
- Coded in facial recognition features by connecting application to Kairos APIs

Chamber Crawler 3000

- Developed a Rogue inspired game for BASH using C++
- Architected the project to maximize code reusability by incorporating various design patterns

Breakout

- Developed a graphical clone of Atari Breakout using XLibraries and C++
- Implemented non-blocking event loop for smooth consistent interactions

Ragdoll Manipulation Desktop App

- Programmed a graphical application realizing a scene graph as a ragdoll, using Java's Swing library
- Enhanced the application by modelling in direct manipulation principles

Photo Filtering Android app

- Created an Android application to fetch pictures over the network and display them based on rating based filtering system
- Implemented the app utilizing various activities and widgets
